Dr. Ernest Winocour
Department of Genetics
Weizmann Institute of Science
Rehovot, Israel

Dear Ernest:

I enjoyed seeing you on your recent visit and comparing our results. You will be receiving a small honorarium from the University.

This week we plan to grow H. influenzae and H. parainfluenzae in the 300 liter fermenter at NIH and will soon have a lot of the respective restriction enzymes. Also, Ham Smith has fractionated the Endo R of H. influenzae into two or three components. One of these appears to make 5 breaks and another 6 breaks in SV40 DNA. I'll let you know shortly whether we can get larger quantities of these separated enzymes.

With best regards,

Sincerely,

Daniel Nathans
